KINGSTON ANGUS

Quality Angus Genetics

WELCOME TO KINGSTON ANGUS.

Welcome to our first on property bull sale since 2018. During the drought I have made some of the hardest decisions I ever had to make and culled very hard. This has limited our numbers substantially. The last few years we have sold all our bulls out of the paddock.

Of the 16 bulls on offer 9 are suitable to use over heifers. Some bulls have exceptional growth EBVS, others have excellent indices and IMF. In sourcing genetics every year, we are looking for animals with well balanced EBVS. With the commercial buyer in mind, we have emphasised good structure, calving ease and temperament.

Next year we will have 28 bulls on offer. This drop will feature reference sires such as Landfall New ground TFAN90, Texas Top Gun DXTR66, Rennylea NORL519, Pathfinder Genesis SMPG357, and some of our homegrown favourites sired by Black Onyx QHFW-WA and Spickler Powerpoint WS5503.

I hope we have good weather on sale day and that you will enjoy the day and catch up with a few old friends.

Kind regards
Adelle Botes

SALE INFORMATION

INSPECTION: Bulls will be penned for inspection from 9:00am on sale day Thursday 20 July 2023.

Prior inspection welcomed by appointment.

HEALTH: All bulls have been Vet checked semen tested including morphology. They have been double vaccinated with 7 in one, Vibrovax, and Pestiguard. All bulls have been vaccinated with Ultravac BEF (3- day sickness), but will need annual boosters of these vaccinations to retain immunity.

TRANSFERS: All bulls are eligible for transfer by the ANGUS SOCIETY into the buyers name. Please provide herd ID name and address details so transfers can be completed.

DELIVERY: Bulls will be available for delivery immediately after the sale.

NLIS: Our PIC is NC592523. Please provide your PIC number on your registration form to facilitate transfers on the NLIS database.

REBATE: A rebate of 3% is offered to outside agents who introduce buyers to the selling agent in writing at least 24 hours prior to the sale and settle accounts on the purchaser's behalf within 7 days of the sale.

INSURANCE: There is no insurance on the cattle sold. Buyers are reminded that it is their responsibility from the fall of the hammer to organise insurance.

SELLING SYSTEM: Sale of animals will be conducted under the Helmsman Auction System. Please see the notes on the Helmsman Auction System in this catalogue.

GST will be added at the completion of the sale to the purchase price. Buyers will be invoiced for purchase price plus GST.

PHONE BIDS: Telstra reception is good. Phone bidding will be accepted. Please note that any phone bid offered will be placed on the bid board only if it reaches the Board Official prior to a bid from a buyer at the sale. If you would prefer to place your bids over the phone, please contact Crump Stock & Station Agency at least 24 hours prior to the sale to make arrangements.

CATERING: Morning tea, lunch and refreshments will be provided on sale day with compliments of the vendor.

TRAVEL TIMES: From Warialda 55 minutes, Bingara 1 hour, Inverell 15 minutes, Bundarra 1 hour 5 minutes.

PUBLIC LIABILITY: Any person attending the sale does so at their own risk. All persons attending the sale release the vendor of all actions and demands due to any loss; death, damage or injury occurring on the premises. The vendor is not responsible and has no liability for any death or injury to any person or any loss or damage to any person attending the sale, their property or otherwise. No children under 18 years of age are allowed into the bull pens.

INDEMNITY: All persons attending the sale agree to indemnify the vendor from and against any liability, loss, damage, expense or claim which the vendor may incur, including to a third party, before, during or after the sale in all aspects.

GUARANTEE: All bulls sold by Kingston Angus are fertile and structurally sound to the best of our knowledge. If any animal becomes infertile or break down due to reasons other than injury or misadventure at any time in the next 12 months we will:

Provide you with a satisfactory replacement if available or

Issue you with a credit equal to the purchase price less the salvage value that can be used to purchase available animals in future from Kingston Angus.

Normal care needs to be taken as we cannot replace an animal that is injured or dies for any reason. Any claim must be accompanied by a certificate from a registered Veterinarian. All vet costs are the responsibility of the purchaser.

DISCLAIMER: While all due care has been paid to accuracy in the compilation of the catalogue the vendor assumes no responsibility whatsoever for the correctness, use or interpretation of the information on animals included in this sale catalogue.

Selling Agent:

The sale will be conducted as a Helmsman's auction by Crump Stock & Station Agency.

Damien Crump: 0400 757 888

Lots will be sold under the Australian Livestock & Property Agents Association Ltd Standard Stud Stock Auction Terms and Conditions of Sale. If unfamiliar with these terms, please contact Crump Stock & Station Agency. Please obtain a buyer's number and registration slip if you are considering bidding in the sale. At the sale's conclusion, successful purchasers are requested to give written advice to the Selling Agents regarding transport arrangements. No verbal instructions will be taken.

The Helmsman System:

A Helmsman Auction is a buyer friendly system where bidders can place their bids irrespective of order. It gives you more time to consider your bid and you can regularly check to see if your bid is still current, or if you have been outbid. It is a flexible system with no pressure, allowing time to consider each lot.

Outside Agents:

A rebate of 3% is offered to outside agents who introduce buyers to the selling agent in writing at least 24 hours prior to the sale and settle accounts on the purchaser's behalf within 7 days of the sale.

Insurance:

The agent and vendor strongly encourage purchasers to immediately insure their new acquisition(s).

Auctions Plus: Please note all new registered AuctionsPlus buyers are required to complete Buyer Induction Training prior to bidding. AuctionsPlus recommends that all intending bidders have completed their registration and training 24 hours prior to auction.

Phone Bidding:

If you would prefer to place your bids over the phone, please contact Crump Stock & Station Agency at least 24 hours prior to the sale to make arrangements.

THE HELMSMAN SELLING SYSTEM

Auctions do not have to be stressful environments. The Helmsman system combines the best of an auction system and sale by private treaty.

You have more time to consider lodging your bid. You can place bids on any bull of your choice at any time during the sale period.

You have the opportunity to reassess each lot during the sale period without any pressure to make an instant decision. You can take home the bulls you want irrespective of the lot order.

If you are considering buying a number of bulls you will have a better chance to average your purchase cost in order to meet your budget.

People say that the Helmsman system is buyer friendly because it helps them get better value for money. The simultaneous auction method enables them to switch to the best valued animal at any time during the sale.

HOW THE HELMSMAN SELLING SYSTEM WORKS.

1. On arrival intending purchasers need to register at the bid table and receive a bidding number.
2. All animals are displayed for inspection prior to and during the sale.

FAMILY OWNED AND OPERATED

Specialising in livestock, property, clearing and machinery sales

Crump Stock & Station Agency pride themselves on personal, professional service and attention to detail

Damien 0400 757 888 "Leglinton" 31 Park Lane, BINGARA NSW 2404

www.crumpagency.com.au

3. When the sale commences all animals are on the market simultaneously. You may bid on any animal regardless of the lot number, by filling in a bid card with your bid price and buyer number and handed to a "runner". These bids will then be recorded at the table in the order that they were received. Where bids of equal amounts are placed on the same animal the first bid received will be the standing bid.
4. You may open the bidding at the reserve price indicated for each animal and contest bids in multiples of no less than \$500.
5. Bids are recorded with the buyer's number on a large board adjacent to the animal's lot number. You can bid on any number of animals at once and see at a glance whether your bid stands or has been over bid.
6. A bid once submitted and recorded cannot be retracted.
7. The sale will remain open for 20 minutes initially. At the conclusion of 20 minutes a 2 minute bid clock will commence. A bid on any lot restarts the countdown clock. Any further bids on any lot will trigger the same process until a full two minute of "no bid" period the sale will conclude on all lots.
8. All lots are open for sale for the full duration of the sale and all lots will conclude at the same time.
9. If your "first choice" animal goes beyond your limits you can still bid on any other animal in the sale.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

EBV	Unit	Description	Interpretation
CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year-old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year-old heifers.
CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year-old heifers.
GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
MW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
DTC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
CWT	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate a lower score.
Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate a lower score.
Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a lower score.
SA	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self-replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self-replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
LWS	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self-replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self-replacing, grass and grain finishing beef production systems. The SA-L index is similar to the SA index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the SA aims to maintain mature cow weight, the SA-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

BRINGING YOUR NEW BULL HOME

WHEN PURCHASING A BULL, CARE AND HANDLING AFTER THE SALE CAN BE AS IMPORTANT AS THE PURCHASE ITSELF. LOOKING AFTER YOUR BULL WELL DURING THE INITIAL STAGES OF HIS WORKING LIFE MAY ENSURE LONGEVITY AND SUCCESS WITHIN YOUR BREEDING HERD.

PURCHASE

Temperament is an important characteristic when selecting a bull. Selecting a bull that may be flighty or aggressive will make life difficult for you each time he is handled. Note which bulls continually push to the centre of a mob, run around, or are unreasonably nervous, aggressive or excited.

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Use the yard or paddock behaviour as a guide, rather than the temperament shown in the ring.

DELIVERY

When transporting your new bull insurance against loss in transit, accidental loss of use, or infertility, is sometimes provided by vendors. Where it is not, it is worth considering. After purchase tips:

- When purchasing, ask which health treatments he has received.
- Treat and handle him quietly at all times - no dogs, no buzzers. Talk to him and give him time and room to make up his mind.
- With more than one bull from different origins, you must be able to separate them on the truck.
- Make sure that the truck floor is covered to prevent bulls from slipping. Sand, sawdust or a floor grid will prevent bulls from being damaged by going down in transit.
- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible if necessary, rest with water and feed. Treat bulls kindly your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

IF YOU USE A PROFESSIONAL CARRIER:

- Make sure the carrier knows which bulls can be mixed together.

- Discuss with the carrier, resting procedures for long trips, expected delivery time, truck condition and quiet handling.

- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into another State.

When buying bulls from far away, you may often have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

ARRIVAL

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows. Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning.

The next day, bulls should receive routine health treatments. If they have not been treated before, all bulls should be vaccinated with:

- 5-in-1 vaccine;
- vibriosis vaccine;
- leptospirosis vaccine (if in areas like the Hunter where leptospirosis exists);
- three-day sickness vaccine (if in areas where this sickness can cause problems).

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. These bulls show no signs of the illness. Vaccinated bulls are free from vibriosis, so vaccinating bulls against the disease should be a routine practice.

Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year. Complete the vaccinations 4 weeks before joining.

PURCHASE

MANAGING OLDER HERD BULL

AFTER PURCHASE TIPS

DURING MATING

ARRIVAL

MATING NEW YOUNG BULLS NORTHERN AUSTRALIA

BRINGING YOUR NEW BULL HOME

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice.

Plan to give follow-up vaccinations 4–6 weeks later. Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

MATING NEW YOUNG BULLS

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

NORTHERN AUSTRALIA

Although the Angus breed originated in a cooler climate, they can adapt to subtropical regions with many straight-bred and cross bred producers finding success in Northern Australia. Some of the following information may also be helpful for new bulls located in more temperate climates.

ADAPTATION

They key to Northern success for Angus is that cattle introduced from the Southern regions of Australia be allowed to adapt to their new environment before commencing their working life. If possible, a break of 3 months is advisable before you set your bull to work.

PURCHASE IN COOLER MONTHS

Ensure your bulls are in good condition before they do commence their working life. The cooler months are an ideal time to purchase and introduce Angus cattle, allowing them plenty of time to acclimatise.

CHANGE OF FEED SOURCE

When inducting Angus cattle into your herd consider their source of feed. Have you taken an animal which has been supplemented on grain straight to a dry pasture? Animals should be gradually changed over to their new feed to ensure they do not lose condition. This may involve using supplements which could include dry lick/urea blocks.

MANAGING CATTLE TICKS

For ticky areas, bulls should be vaccinated prior to transport and given another booster afterwards. Remember males are more susceptible to ticks than females.

Information is provided by the Department of Primary Industries NSW. For further information visit the DPI web site: www.dpi.nsw.gov.au or www.angusaustralia.com.au. Further reading - Buying Angus Bulls
